

CUSTOMER GUIDE

CareChart Customer Configuration and User Guide

Hospital setup and daily workflows for doctors and care teams

CareChart public home page and access points

Audience	Edition	Scope
Doctors, administrators and authorized hospital staff	Customer edition - September 2026	Outpatient setup, clinical workflow, diagnostics, billing and patient access

Demonstration data All names, identifiers and clinical information shown in this guide are fictional and are intended only for training and presentation.

PRODUCT OVERVIEW

A connected outpatient workflow

CareChart brings registration, appointments, consultations, diagnostics, records, billing and patient access into one hospital-scoped workspace.

Product overview showing the main hospital workflows

- **One patient record.** Clinical, diagnostic and billing information stays connected to the same hospital record.
- **Role-based access.** Staff see the areas needed for their assigned work.
- **Traceable activity.** Important security and operational actions are recorded for authorized review.

Clinical responsibility CareChart records information and displays workflow alerts. It does not replace professional judgement, hospital policy or the clinician's responsibility for patient care.

PRODUCT OVERVIEW

What the platform covers

The customer experience extends from appointment request through clinical documentation, reports, invoices and patient access.

CareChart capability summary

Area	Primary purpose
Front Desk	Find or register patients, manage arrivals and begin visits.
Doctor's Desk	Open the waiting room and document consultations.
Patient Records	Review permitted longitudinal patient information.
Diagnostics	Process operational orders, reports and clinical acknowledgement.
Billing	Generate invoices and record payments or refunds.
Patient Portal	Give an activated patient access to their own information.

GUIDE MAP

Use the guide by role

Administrators should complete hospital configuration first. Other staff can begin with the section that matches their daily work.

Role	Start with	Typical responsibility
Hospital administrator	Administration and configuration	Hospital account, staff access, clinics, schedules, prices and order capabilities
Doctor	Doctor's Desk and consultation	Clinical documentation, prescriptions, requested tests and imaging, report review
Front desk	Patient registration and appointments	Patient identity, arrivals, appointments and queue entry
Lab or radiology	Diagnostics	Operational worklist processing and report upload
Billing	Invoices and payments	Invoice review, payment, refund, print and void workflows
Patient	Patient portal	Account activation and access to the linked patient record

Recommended reading order

1. Access and hospital selection
2. Hospital configuration and staff setup
3. Daily patient and clinical workflows
4. Diagnostics, documents, billing and audit
5. Patient portal, go-live controls and troubleshooting

Before entering real patient information Complete the hospital's clinical, privacy, legal, security, backup and operational approvals. Test the full workflow with fictional patients first.

ACCESS

Staff sign in

Each staff member should use an individual account. Shared credentials prevent reliable access control and audit review.

Staff sign-in page

1. Enter the email address assigned to your account.
2. Enter your password and select Sign in.
3. Use the approved password-reset process when access is lost.
4. Confirm the hospital shown after sign-in before opening patient information.

Safe access Never share passwords, reuse another employee's account or leave a signed-in device unattended.

ADMINISTRATION

Create and select a hospital workspace

Super Admin users can create hospital accounts and switch between the hospital workspaces assigned to them.

The screenshot shows the CareChart interface for a Super Admin user. The top navigation bar includes the CareChart logo, the hospital name 'New Life Hospital', and the user's role 'Super Admin - SUPER_ADMIN' with a 'Sign out' link. Below the navigation bar is a horizontal menu with options: Front Desk, Doctor's Desk, Patient Records, Admin (selected), Billing, Diagnostics, Documents, Audit, and Settings.

The main content area is titled 'Admin' and includes a sub-header 'Admin' with a description: 'Invite staff, approve join requests, and manage roles for New Life Hospital.' Below this is a section titled 'CREATE HOSPITAL ACCOUNT' with four input fields: 'HOSPITAL / CLINIC NAME', 'ADMINISTRATOR NAME', 'ADMINISTRATOR EMAIL', and 'TEMPORARY PASSWORD'. A 'Create hospital' button is located to the right of these fields.

Below the 'CREATE HOSPITAL ACCOUNT' section is a section titled 'INVITE STAFF BY EMAIL' with an 'EMAIL' input field (containing 'name@example.com') and a 'ROLE' dropdown menu (set to 'Front Desk'). A 'Send invite' button is located to the right of these fields.

Below the 'INVITE STAFF BY EMAIL' section is a section titled 'ADD USER MANUALLY' with an '+ Add user' button.

Below the 'ADD USER MANUALLY' section is a section titled 'PENDING JOIN REQUESTS (0)' with a message: 'No pending requests.'

Administration page for hospital creation and staff onboarding

1. Enter the hospital name and the first administrator's details.
2. Create the hospital, then select it from Active Hospital.
3. Verify the selected hospital before configuring clinics or inviting staff.

Workspace boundary Changing the active hospital changes the workspace. It does not move patients, visits, invoices, staff or settings between hospitals.

ADMINISTRATION

Review staff access

Administrators should keep the staff list current and assign the smallest role needed for each person's work.

ACTIVE STAFF (10)

Super Admin superadmin@emrapp.in	Super Admin	
New Life Administrator newlife.admin@emrapp.in	Admin	Remove
Maya Shah dr.maya.shah@emrapp.in	Doctor	Remove
New Life Clinic Admin newlife.clinicadmin@emrapp.in	Front Desk	Remove
Aarav Kapoor dr.aarav.kapoor@emrapp.in	Doctor	Remove
New Life Reception newlife.reception@emrapp.in	Front Desk	Remove
New Life Front Desk newlife.frontdesk@emrapp.in	Front Desk	Remove
New Life Billing newlife.billing@emrapp.in	Billing	Remove
New Life Nurse newlife.nurse@emrapp.in	Nurse	Remove
New Life Diagnostics newlife.diagnostics@emrapp.in	Lab / Radiology	Remove

Active staff list and role management

- Confirm the person's name, email and current duties before changing a role.
- Remove or suspend access promptly when a person leaves or no longer needs the system.
- Never reuse a former employee's account for another staff member.

HOSPITAL CONFIGURATION

Configure locations and departments

Configuration belongs to the active hospital. Begin with the locations where care is delivered.

Clinic configuration
Configure care locations, clinician availability, billable services, and tax rules.

Locations and departments

CLINIC NAME CLINIC CODE

ADDRESS IANA TIMEZONE

Add clinic

CLINIC CONFIGURATION TYPE

NAME

Add configuration

New Life Hospital – Main Clinic HLH01
New Life Hospital Campus - Asia/Kolkata
Departments: General Medicine, Pediatrics
Appointment types: General Medicine Consultation (30m), Pediatrics Consultation (30m)

Clinic locations and department configuration

1. Enter the clinic name, code, address and IANA timezone, such as Asia/Kolkata.
2. Add the departments and appointment types used at that location.
3. Use stable clinic codes so reporting and integrations remain consistent.

HOSPITAL CONFIGURATION

Link practitioners and weekly schedules

A doctor account must be linked to a practitioner profile and clinic before reliable scheduling can begin.

Dr. Aarav Kapoor - Pediatrics

New Life Hospital – Main Clinic / Pediatrics

Monday 09:00–17:00 (30m) - Tuesday 09:00–17:00 (30m) - Wednesday 09:00–17:00 (30m) - Thursday 09:00–17:00 (30m) - Friday 09:00–17:00 (30m) - Saturday 09:00–17:00 (30m)

Practitioner profile and weekly schedule configuration

1. Choose the doctor, clinic and department.
2. Record specialty, qualification and registration number as required by hospital policy.
3. Set each working weekday, start and end time, slot length and optional break.
4. Review the saved weekly schedule before publishing appointment availability.

HOSPITAL CONFIGURATION

Control blocked time and holidays

Use blocked periods for practitioner-specific unavailability and clinic holidays when an entire location is closed.

The screenshot displays the 'Block practitioner time' and 'Add clinic holiday' controls. At the top, two practitioner profiles are listed: Dr. Aarav Kapoor (Pediatrics) and Dr. Maya Shah (General Medicine), each with their respective clinic and weekly schedule. Below these, the 'Block practitioner time' section includes a 'PRACTITIONER' dropdown (set to 'Select practitioner'), a 'REASON' text field, 'STARTS' and 'ENDS' date pickers (format: mm/dd/yyyy --:-- --), and an 'Add blocked time' button. The 'Add clinic holiday' section includes a 'CLINIC' dropdown (set to 'Select clinic'), a 'HOLIDAY NAME' text field, a 'DATE' picker (format: mm/dd/yyyy), and an 'Add holiday' button.

Blocked practitioner time and clinic holiday controls

- **Blocked time.** Record leave, meetings or another period when one practitioner cannot accept appointments.
- **Clinic holiday.** Close appointment availability for the selected clinic and date.
- **Clear labels.** Enter a useful reason or holiday name so staff can understand why slots are unavailable.

HOSPITAL CONFIGURATION

Enable only the operational order systems in use

CareChart separates clinical recommendations from operational orders sent to hospital departments or imaging systems.

Diagnostic order capabilities

Operational diagnostic orders
Enable this only when the hospital has a laboratory or diagnostic department that can receive and process operational orders. Doctors can still record tests under Tests ordered when this is disabled.
Disabled by default Off

Operational imaging orders (HL7 / modality workload)
Enable this only when the hospital has radiology equipment or a connected modality workload that can receive HL7 orders. Doctors can still record requested scans under Imaging ordered when this is disabled.
Disabled by default Off

Hospital-level controls for operational diagnostic and imaging orders

- **Operational diagnostic orders.** Enable only when the hospital has a laboratory or diagnostic department that will receive and process orders.
- **Operational imaging orders.** Enable only when radiology equipment or a connected HL7 modality workload is configured and validated.
- **Default state.** Both controls remain off until an authorized administrator enables them.

Doctor workflow Doctors can still record requested investigations under Tests ordered and Imaging ordered when operational integrations are disabled.

FRONT DESK

Manage arrivals from one workspace

The Front Desk workspace combines the daily appointment schedule with patient search and walk-in registration.

Front Desk schedule and patient arrival panel

1. Search by MRN, patient name or phone before creating a new record.
2. Verify more than one identifier before selecting a patient.
3. Register a walk-in only when no correct existing record is found.
4. Check scheduled patients in when they arrive so they enter the doctor's queue.

FRONT DESK

Register a new patient

Capture the minimum information required for safe identification and the current visit.

The screenshot shows the 'New Patient Registration' form within the CareChart EMR App Administration interface. The form is titled 'New Patient Registration' and has a '← Back' button in the top right corner. The form fields are as follows:

- FULL NAME ***: A text input field.
- DATE OF BIRTH**: Three dropdown menus for 'Day', 'Month', and 'Year'.
- AGE ***: A text input field.
- GENDER ***: A dropdown menu with 'Select gender' as the placeholder.
- DOCTOR ***: A dropdown menu with 'Select doctor' as the placeholder.
- PHONE**: A text input field.
- EMAIL**: A text input field.
- BLOOD GROUP**: A text input field.
- EMERGENCY CONTACT**: A text input field.
- ADDRESS**: A text input field.
- KNOWN ALLERGIES**: A text input field with a placeholder 'e.g. Penicillin — press Enter'.

A green button labeled 'Save patient & continue to visit' is located at the bottom right of the form.

New patient registration with simplified day, month and year entry

1. Enter the patient's full name as provided.
2. Choose day and month, then type the four-digit birth year. Age is calculated automatically.
3. If the exact birth date is unknown, leave all three birth-date fields blank and enter age.
4. Record gender, doctor, contact information and address according to hospital policy.
5. Enter each known allergy separately and review the information before saving.

APPOINTMENTS

Book an appointment from the schedule

Authorized staff can create an appointment for an existing patient and assign it to the appropriate doctor and time.

The screenshot shows a 'New appointment' modal form. At the top, the title 'New appointment' is on the left and a close 'X' button is on the right. Below the title is the 'PATIENT *' section with a search bar containing the placeholder text 'Search name, MRN, or phone'. The 'DOCTOR' section is a dropdown menu currently showing 'Unassigned'. The 'TIME *' section shows '09:00 AM' with a clock icon, and the 'DURATION' section shows '30 minutes' with a dropdown arrow. Below these is a large text area for 'REASON FOR APPOINTMENT'. At the bottom right are two buttons: 'Cancel' and 'Book appointment'.

Manual appointment form

1. Search for and select the correct patient.
2. Choose the doctor, time, duration and reason for appointment.
3. Review availability, then select Book appointment.

APPOINTMENTS

Offer public appointment requests

The public booking page allows a patient to request an available doctor and time without using the staff workspace.

EMR App [← Back home](#)

ONLINE APPOINTMENT

Choose a doctor and request a convenient time.

Share your contact details and reason for visiting. The doctor will review your request before the appointment is confirmed.

- 1 Choose an available doctor
- 2 Pick an open date and time
- 3 Send your request for approval

REASON FOR VISIT
Briefly describe the reason

☐ I accept the clinic privacy notice and appointment-booking terms.

Confirm appointment

The selected doctor will review your request before it is confirmed.

Public appointment request page

- The patient chooses the hospital, clinic, doctor, date and available time.
- A request is not a completed visit. Authorized staff or the doctor reviews it before confirmation.
- Front Desk checks the patient in on arrival.

DOCTOR WORKFLOW

Open the waiting room

Doctor's Desk combines appointment requests, confirmed appointments and patients waiting for consultation.

Doctor's Desk appointment queues and waiting room

1. Review pending appointment requests according to the hospital's booking process.
2. Open a patient from Waiting Room only when ready to begin the consultation.
3. Confirm the patient and visit reason before documenting clinical information.

DOCTOR WORKFLOW

Document the consultation

The consultation begins with patient identity, allergy status, chief complaint and available vital signs.

The screenshot displays the 'Doctor's Desk' interface for 'New Life Hospital'. The top navigation bar includes links for Front Desk, Doctor's Desk (active), Patient Records, Admin, Billing, Diagnostics, Documents, Audit, and Settings. The user is logged in as 'Super Admin - SUPER_ADMIN' with a 'Sign out' option.

The main form is titled 'Test Patient' and includes the following sections:

- Patient Header:** 4 yrs - MALE - O+ · 1234567890 · DOB 1/1/2022. Buttons for 'Print report' and 'Back to queue' are present.
- Allergies:** 'No known allergies'.
- Chief complaint:** 'test'. **Vitals:** BP —, Temp —°C, Pulse —, Wt —kg.
- EXAMINATION NOTES / DOCTOR'S FEEDBACK:** A text area with the placeholder 'Findings on examination...'.
- DIAGNOSIS:** A text area.
- ADVICE TO PATIENT:** A text area with the placeholder 'e.g. Rest, stay hydrated, and return if symptoms worsen.'.
- PRESCRIPTION:** A section with a '+ Add medicine' button.
- TESTS ORDERED:** A section with a search bar containing 'Search CBC, thyroid, culture, vitamin, genetic test...' and a '+ Add' button.

At the bottom, a note states: '508 laboratory tests available. Search by test name, profile, category, or abbreviation. Free-text tests are also accepted.'

Clinical consultation form with patient header and primary documentation fields

1. Verify the patient header and review allergy information before prescribing.
2. Record examination findings, diagnosis and advice in clear clinical language.
3. Add medicines only after reviewing allergies, duplicate therapy and displayed safety warnings.
4. Use Tests ordered to search the laboratory catalog or enter an appropriate free-text test.

DOCTOR WORKFLOW

Record imaging and control operational orders

The clinical recommendation fields remain available even when the hospital does not operate an internal laboratory or imaging worklist.

The screenshot displays the 'IMAGING ORDERED' section with a search bar containing 'Search chest X-ray 2V, MRI brain, CT KUB, ultrasound...' and an '+ Add' button. Below the search bar, it states '271 imaging procedures across 12 modalities available. This records the doctor's recommendation and does not send an HL7 order.'

The 'OPERATIONAL DIAGNOSTIC ORDERS' section is titled 'Not enabled for this hospital.' and includes the text: 'Record the requested investigation under Tests ordered above. A hospital administrator can enable operational orders in Settings.'

The 'IMAGING ORDER (SENDS HL7 TO MODALITY WORKLIST)' section is titled 'Operational imaging orders are disabled for this hospital.' and includes the text: 'Record the requested scan under Imaging ordered above. An administrator can enable HL7 / modality-worklist orders in Settings.' Below this is a link '► Imaging order history (1)'.

The 'DOCTOR'S SIGNATURE' section shows 'Signing as Super Admin' and a checkbox 'I confirm this consultation record is accurate and digitally sign it.' At the bottom right are two buttons: 'Save draft' and 'Complete & sign visit'.

Imaging recommendations, disabled operational orders and visit signature

- **Imaging ordered.** Search the catalog by procedure, modality or body part. The catalog includes 271 procedures across 12 modalities in this edition.
- **Tests ordered.** Search the laboratory catalog by name, profile, category or abbreviation. Free-text entry remains available.
- **Operational orders.** When disabled, the application records recommendations without creating departmental or HL7 work.
- **Signature.** Save a draft while documentation is incomplete. Confirm the signature and complete the visit only after reviewing the record.

Corrections after signing Use the hospital's approved amendment process so the original signed record remains traceable.

PATIENT RECORDS

Find the correct patient record

Patient Records provides hospital-scoped search and access to permitted longitudinal information.

The screenshot shows the CareChart interface for New Life Hospital. The top navigation bar includes the hospital name, a user profile dropdown for 'Super Admin - SUPER_ADMIN' with a 'Sign out' link, and a menu with options: Front Desk, Doctor's Desk, Patient Records (highlighted), Admin, Billing, Diagnostics, Documents, Audit, and Settings. Below the navigation bar is a search bar with the placeholder text 'Search by MRN, patient name, or phone'. The search results are displayed as a list of four patient records, each with a patient icon, name, MRN, age, gender, and visit count, followed by a dropdown arrow.

Patient Name	MRN	Age	Gender	Visits
Onkar Pawar	MRN-000004	28 yrs	MALE	1 visit on file
test 2	MRN-000003	7 yrs	FEMALE	1 visit on file
Test Patient	MRN-000002	4 yrs	MALE	1 visit on file
Ananya Mehta	MRN-000001	28 yrs	FEMALE	1 visit on file

Patient Records search results

1. Search by MRN, patient name or phone.
2. Verify more than one identifier before opening the record.
3. If two records may belong to the same person, stop and use the approved duplicate-review process.

PATIENT RECORDS

Review the longitudinal clinical summary

The selected record brings together demographics, safety information, encounters, medication history and other permitted clinical information.

The screenshot shows the CareChart interface for 'New Life Hospital'. The top navigation bar includes 'Front Desk', 'Doctor's Desk', 'Patient Records' (highlighted), 'Admin', 'Billing', 'Diagnostics', 'Documents', 'Audit', and 'Settings'. The user is logged in as 'Super Admin - SUPER_ADMIN' with a 'Sign out' button.

A search bar at the top left allows searching by MRN, patient name, or phone. The patient record for 'Onkar Pawar' (MRN: 000004, 28 yrs - MALE - 1 visit on file) is displayed. Demographics include Phone: 9405280153, Date of birth: 2/20/1998, Blood group: B+, Address: A201, Shree Sumeru Plaza, Marunji, and Emergency contact: --. A green bar indicates 'No known allergies'.

The 'LONGITUDINAL CLINICAL SUMMARY' section contains six expandable cards: Allergies, Problem list, Current medications, Immunizations, Procedures, and Safety flags. Each card shows 'None recorded' and has a '+' icon to expand.

Below this is the 'IDENTITY AND DUPLICATE MANAGEMENT' section with a 'REVIEW' button. The 'VISIT HISTORY' section shows a single encounter on 9/4/2026 at 1:31:37 PM for 'Cold and fever', marked as 'Completed'.

Expanded patient record and clinical summary

- Review allergies and active safety information before clinical decisions.
- Use the encounter history to understand previous diagnoses, medicines, tests and imaging recommendations.
- Edit demographics only after confirming the information with the patient and following hospital policy.

Minimum necessary access Open a patient record only when it is needed for assigned work. Patient access may be recorded in audit history.

DIAGNOSTICS

Process operational diagnostic orders

The Diagnostics workspace is used only for orders created through the enabled operational workflow.

The screenshot displays the CareChart interface for 'New Life Hospital'. The top navigation bar includes links for Front Desk, Doctor's Desk, Patient Records, Admin, Billing, Diagnostics (active), Documents, Audit, and Settings. The user is logged in as 'Super Admin - SUPER_ADMIN' with a 'Sign out' option.

The main section is titled 'Diagnostic orders' and includes a sub-instruction: 'Start collection or processing, attach the final report to the order, and send it to the ordering doctor for review.' Below this are two dropdown filters: 'All types' and 'All statuses'.

Two diagnostic orders are listed:

- Rapid influenza test**: DO-20260829-118F458A - Ananya Mehta (MRN-000001) - LABORATORY - ROUTINE - Dr. Maya Shah. Status: REVIEWED. A diagnostic report is attached: 'Open Rapid_Influenza_Test_Report.pdf - 2.8 KB'.
- Complete blood count**: DO-20260829-B76069A0 - Ananya Mehta (MRN-000001) - LABORATORY - ROUTINE - Dr. Maya Shah. Status: REVIEWED. A diagnostic report is attached: 'Open Complete_Blood_Count_Report.pdf - 2.9 KB'.

Diagnostics workload with report processing and completed orders

1. Filter the workload by type or status when needed.
2. Begin collection or processing only when the sample or patient reaches the department.
3. Complete the work in the hospital's approved laboratory or radiology process.
4. Attach the final approved report and send it to the ordering doctor.
5. The ordering clinician opens and acknowledges the completed report after review.

Status meaning Completed means a report was uploaded. Reviewed means an authorized clinician acknowledged it. Neither status replaces clinical review of the report.

DOCUMENTS

Store approved patient documents

Documents keeps supported patient files inside the selected hospital workspace with controlled access.

Patient document search and upload workspace

1. Search for the patient and verify the correct record.
2. Choose an approved PDF, JPEG or PNG file.
3. Link a final report to its diagnostic order when applicable.
4. Confirm the patient, document type and active hospital before upload.

Upload safety Do not upload unrelated files, passwords, multi-patient exports or documents that have not been approved under hospital policy.

BILLING

Review invoices and outstanding balances

Billing lists invoices for the active hospital and provides access to the full invoice workflow.

Audit history with time, action, resource, actor and reason

- Use audit history only for authorized operational, privacy, security and support reviews.
- Search by event details when investigating a known action or time period.
- Do not place passwords, tokens or unnecessary clinical information in an audit reason.

Interpretation An audit event shows that an action occurred. It does not by itself determine whether that action was clinically appropriate.

PATIENT PORTAL

Use the separate patient sign in

Patients use the patient portal rather than the staff sign-in page.

A screenshot of the Patient portal sign-in page. The page has a light beige background. In the center is a white card with rounded corners. At the top of the card is a green heart icon with a white pulse line, followed by the text "Patient portal" and "Sign in to your patient jacket". Below this is a green box with a white checkmark icon and the text "Your patient login is separate from staff accounts, so both can remain signed in." Underneath is the "EMAIL" label, followed by a light blue input field containing "ponkar07@gmail.com". Below that is the "PASSWORD" label, followed by a light blue input field with masked characters "*****". At the bottom of the card is a dark green button with the text "Sign in to patient portal". Below the button, there is a link "First time here? Activate your portal" and a link "Staff sign in".

Patient portal sign-in page

- The patient enters the registered email address and portal password.
- Staff should direct patients to the approved password-reset or support process when access is lost.
- A portal account must remain linked only to the correct patient record.

PATIENT PORTAL

Activate patient access

Portal activation should follow the hospital's identity-verification process before an account is created.

Patient portal activation form

1. Confirm the patient's MRN, registered email and date of birth.
2. Ask the patient to create a private password that follows the displayed requirements.
3. Do not activate access using an unverified email address or another person's device without consent.

PATIENT PORTAL

Review the patient dashboard

After sign-in, the patient sees only the information connected to the activated patient account.

Patient dashboard with details and clinical summary

- The dashboard summarizes demographics, clinical information and recent activity available to the patient.
- Patients should contact the hospital through the approved channel if information appears incorrect.
- Portal access does not replace urgent or emergency clinical communication.

PATIENT PORTAL

View records and billing history

The patient portal presents available records and billing information without exposing the staff workspace.

Patient records and billing history

- Open the relevant section to review available record or invoice details.
- Use the hospital's approved process for corrections, copies or billing questions.
- Sign out after using a shared or public device.

GO LIVE

New hospital setup checklist

Complete and approve each item before entering real patient information.

- Hospital account created and selected as the active hospital
- Clinic locations, codes, addresses, timezones, departments and appointment types entered
- Doctor accounts linked to practitioner profiles and weekly schedules verified
- Breaks, blocked periods and clinic holidays tested
- Operational diagnostic and imaging capabilities enabled only when integrations are ready
- Service catalog, clinic prices and tax rules approved by the hospital's finance owner
- Staff accounts assigned the minimum required roles
- Email delivery, document storage, encryption, malware scanning, HTTPS and audit review tested
- Encrypted backups completed and a restore test documented
- A complete fictional-patient workflow successfully tested

Approval Clinical, operational, privacy, legal, security and finance owners should approve the configured workflow before real use.

DAILY OPERATIONS

Daily workflow checklists

Walk-in visit

1. Front Desk searches for or registers the patient.
2. Front Desk starts the visit and selects the doctor.
3. Doctor opens the patient from Waiting Room.
4. Doctor documents the consultation, recommendations and any enabled operational orders.
5. Lab or radiology processes operational work and uploads the final report when applicable.
6. Ordering clinician reviews the report.
7. Billing reviews the invoice and records payment.

Online appointment

1. Patient submits a public appointment request.
2. Authorized staff or the doctor reviews and confirms it.
3. Front Desk verifies and checks the patient in on arrival.
4. The clinical, diagnostic and billing workflow continues as for a walk-in visit.

PRIVACY AND SECURITY

Protect patient and hospital information

Every user is responsible for handling patient information only for approved hospital work.

- Use an individual account and lock the device when stepping away.
- Confirm the active hospital and patient before viewing, entering, uploading, printing or billing information.
- Access only the minimum information needed for assigned work.
- Use fictional identities in demonstrations, training materials and sales presentations.
- Remove patient details, staff emails, internal identifiers, tokens and private URLs from support screenshots.
- Follow the hospital's approved retention, backup, access-review and incident-response procedures.
- Apply the legal and regulatory requirements relevant to the hospital and deployment location.

Important This guide explains product workflows. It is not a certification of regulatory compliance, clinical safety or production readiness.

SUPPORT

Troubleshooting and safe escalation

Problem	First checks
Wrong hospital is shown	Open Active Hospital if authorized, or confirm assignment to the correct hospital.
A menu is missing	Check the signed-in role; functions outside that role are hidden.
Patient is not found	Confirm the hospital and search another approved identifier before creating a record.
Doctor is missing	Confirm an active doctor account is linked to a practitioner profile and clinic.
No appointment slots	Check schedule, breaks, blocked time, holidays and existing appointments.
Invoice price is zero	Verify the service name and active clinic price in Settings.
Report cannot be uploaded	Confirm the order status and use an approved file type within the size limit.
Page remains loading	Refresh once, then contact support with the page name and approximate time.

Information safe to send support

- Page name and approximate time of the issue
- Your role and the hospital name shown in the header
- The non-sensitive error message and steps that led to it
- A screenshot only after patient details, credentials, tokens, emails, identifiers and private URLs are removed

Do not send Passwords, authentication codes, database credentials, complete patient exports or unapproved clinical documents.
